

Modeling Workshop

Fredericton, New Brunswick

September 14, 2010

8:30 AM

Cost \$750.00

This year's Modeling Workshop will be led by Remsoft co-founder and Chief Technology Officer Ugo Feunekes and Global Director of Training, Andrew "the wizard" Cogswell. This session is for advanced users of the software. Below is a sample of the topics we have chosen for this year's session. If you have any feedback, please email info@remsoft.com.

- Carbon Modeling Revisited- "What we can do now" – This session will introduce an alternate matrix structure for modeling carbon credits under an emissions trading scheme.
- New Features – the best part of advanced training is when you get to delve into the new features from the latest release of Remsoft technology. This is a very detailed session designed to improve your models and save you time.
- Modeling Exercise - Building Yield DLLs - Ugo and Andrew will step you through developing, debugging and deploying DLLs. Some of our clients are using DLLs. ALL of our clients are interested in them.
- Introduction to Mixed Integer Programming (MIP) – Applications and examples of MIPs. In this session you will learn about the integer structures available in the software and work through several problems that are best formulated using MIPs.

This workshop is limited to 14 people and sells out every year. Please register your interest ASAP by emailing info@remsoft.com

Also, do not forget to sign up for User Group that starts the next day!
We are going to have a great event.
